Exquisite fires for elegant homes

At wildfire we are committed to providing the highest quality heating products with a proven performance. Our innovative range of gas appliances have been tested to comply with the latest European standards and are manufactured in an ISO certified factory.

“We guarantee* our products for a period of 5 years from installation and our customer service staff are always on hand to help you with any query you may have with your product.”

Our 5 year limited guarantee* is managed directly by Wildfire through our extensive network of service centres throughout the UK. Choose Wildfire for style, performance, reliability, value and peace of mind.

The Wildfire product range includes many products

which have been designed and approved with efficiency at their core. In a world where energy costs have soared we believe it is important to obtain the absolute maximum from your heating appliance. With this in mind the net efficiency of Wildfire open fronted gas fires are up to 62% and the glass fronted fires up to 87.2%. So when you purchase a Wildfire heating product you can be confident that you will be installing a product that will deliver in all installation scenarios. Here at Wildfire we are devoted to innovative design whilst maintaining maximum functionality. All Wildfire slide control products feature the latest patent pending Direct Slide technology.

Wildfire is the premier gas appliance brand from Hearth Products Limited. Hearth Products has been actively involved in design and technology for the fireplace industry across the globe since 2003. Our technologies' have been used in products across Europe, Australia and North America.

*see full terms of conditions of the warranty on our website at www.wildfiregas.co.uk

Some things you need to know

Do I need a Convector or a Radiant Fire?

It is important to know the difference between Radiant heat and Convected heat.

Radiant heat. In short, Radiant heat is emitted from all Wildfire appliances. This type of heat is actually infrared and heats objects in the room. Radiant heat is considered to be the most comfortable and natural form of heat.

Convected heat warms the air in the room. By passing the cooler air which enters the appliance at the bottom, through a heat exchanger, it warms up, then emits the hotter air back into the room from the top of the appliance.

Do I need a Glass Fronted Gas Fire?

A glass fronted fire will be more efficient and therefore more cost effective to run. Glass fronted appliances are generally more expensive to buy

In general terms, it is usually more cost effective to purchase a glass fronted appliance if it is to be used more regularly as the efficiency savings will provide a quicker payback for the more expensive appliance. It is also important to remember that a glass fronted appliance will normally provide a similar amount of heat to an open fronted appliance, however, as it is more efficient, it is cheaper to run.

Brick Chimney

Pre-Fabricated

Pre-Cast

Balanced Flue

What type of flue do I have?

You will need to know what type of flue you have in your home. You will see these icons on each product page which will show if the appliance is suitable for your property. It may be that you have a Brick Chimney (otherwise known as a Class 1 flue), a Pre-Fabricated Metal System (which can be a Class 1 or Class 2 flue) or a Pre-Cast Flue (a flue which is built into the inner brickwork of your home). If you do not have a chimney or flue system in your home then you will need to look for a balanced flue gas fire which, if you already have a balanced flue gas fire in the property, is usually indicated by a flue terminal concealed within a basket on the outside of the property.

Manual Control

Slide Control

Manual Electronic Control

What control options are available?

All Wildfire products are available with a Direct Slide option giving you the ease of reliable and simple operation. The slide is operated from the top right side of the appliance and provides ignition, flame control and turns the fire off when you're finished. Most of the Wildfire range is available in manual control too — these fires have a removable cover at the base of the fire where the rotary control and igniter are situated.

Wildfire are also now introducing the manual electronic ignition to make the manual control range even easier to use.

Natural Gas

What type of gas do I need?

Wildfire appliances are currently only available for natural gas.

Function & Performance

O.D.S

The Oxygen Depletion Sensor will automatically shut off the gas supply to the burner if the oxygen level in the room falls below a particular level. This is important as it will turn off the appliance should the flue become blocked or a lack of ventilation occurs.

F.S.D

The Flame Supervision Device is designed to sense the presence of a flame. Should the flame be extinguished for any reason then the safety device will cut off the supply of gas to the burner.

Optional Ezi-Grip Handle

Most Wildfire appliances can be fitted with an elderly/infirm handle to ease the lighting operation. This larger handle is much easier to access and move so if you think that this may be a requirement then talk to your retailer who will demonstrate the Ezi-Grip system. This handle is purchased as an accessory and is fitted at the point of installation of the appliance.

The Wildfire range is proud to now include a range of glass fronted high efficiency gas fires. These products feature the latest technology in high output gas fires and deliver the most effective way of heating your living room. The range includes both mid-depth convector and full depth convector products, both available with Direct Slide Technology. The Cressida (full depth) appliance can also be installed into a hole in the wall by fitting the designer Ellipsis HIW trim (See pages 31 and 32). The balanced flue gas fire is also a high efficient appliance, for a no chimney solution, the Thermes delivers heat, value for money, efficiency and is available with a large range of trim options.

Open fronted appliances are designed to operate with the revolutionary XE system which is only available from Hearth Products. This new efficiency system is designed to 'tune' the appliance to your fireplace flue, thereby ensuring you obtain the maximum output from the appliance.

Regulations demand that gas fires must be installed by a Registered Gas Safe Engineer. For further information regarding Gas Safe requirements contact Wildfire directly, where we will be happy to give you advice. Warranty will be void if the appliance is not fitted in accordance to these legal requirements.

HE 900 (Standard)

HE

83% EFFICIENCY

The HE900 is the flagship model from Wildfire, the ultimate in fireplace technology.

The HE900 gas fire is revolutionary. It has been developed to create a European format appliance with expansive viewing glass that can be installed into a conventional 16" x 22" fireplace opening without any modification. This patent pending product is designed to fit UK fireplace openings with no need to alter the fabric of the building.

The HE900 features a stunning log and ember bed easily controlled with a slide operating system which comes as standard. Finally, the ultimate fireplace solution has arrived...

HE 950L (Standard)

The new HE950L is the perfect appliance to bring your fireplace to life.

Just like the HE900, its predecessor, this fire fits into your standard 16" x 22" builders opening. No building work, lintels, mess and added costs. The fabric of your home will remain intact but you will benefit from a landscape large format gas fire with beautifully crafted logs and colourful dancing flames. Ask your retailer for the different fireplace design options available with the HE950L, they will be able to deliver a suite to compliment the style of your living room.

The HE950L will be available from June 2018.

HE 950L (PCF)

HE

The new HE950L (PCF) delivers the same benefits as the standard model but can be installed into any precast flue.

For too many years the gas fire options to customers who have precast flues have been extremely limited. Patent pending technology enables this product to work in these very small flues. This fire features a full width realistic log fuel bed with rolling flames guaranteed to captivate and mesmerise the most discerning home owner. Classic elegance...in a precast flue.

The HE950L will be available from June 2018.

Panama HE

HE

Panama shown with Creative Contemporary Chrome/Black trim.

This fire requires a fireplace suite with a 3" rebate and a back panel opening of a specific size. Talk to your retailer for full details.

87%
EFFICIENCY

The Panama log fire is a revolutionary product.

This wide format glass fronted gas appliance has the appeal of a European fire but the benefit of fitting into a standard 16" x 22" chimney breast opening. Normally an appliance of this stature would require building work and installation of a new lintel. The Panama has a patent pending installation system which, in conjunction with your new fireplace will provide a much more cost effective solution for this type of product. Talk to your dealer for full details. The Panama comes in slide control as standard.
